Zhangye: The "progress bar" of the project is surging with new momentum

Reporter Wu Yujie

Tower cranes are lined up, and welding sparks are splashed everywhere. A few days ago, at the construction site of the 17MW/68MWh gravity energy storage project in Zhangye, large construction machinery and equipment shuttled back and forth, a busy scene. "Since the start of construction in January last year, we have rushed the construction period and caught up with the schedule with a sense of urgency, and up to now, the construction of the main structure of the third underground floor and the first floor above ground has been completed." Project leader Zhou Guobing told reporters.

The main tower of Zhangye 17MW/68MWh gravity energy storage project is 175 meters high, with two 8.5MW generators designed and 6,990 energy storage blocks weighing 25.5 tons. After the completion of the project, it will serve the Northwest Power Grid and various new energy projects, and help Zhangye's new energy industry strengthen the foundation and supplement the chain.

At the construction site of the Hz electrolysis equipment manufacturing project of Gansu Hongze Haijin Hydrogen Energy Technology Co., Ltd., technical personnel in various regions are carrying out equipment installation and commissioning in an orderly manner. It is understood that the project has a total investment of 120 million yuan, started construction in May last year, and plans to complete installation and commissioning in mid-June this year. After the completion of the project, it can achieve an annual output of 1GW alkaline water hydrogen electrolyzer and 25 sets of green hydrogen electrolysis system production lines, driving the employment of more than 100 people.

Located in the Circular Economy Demonstration Park of Zhangye Economic and Technological Development Zone, Gansu Hexi Silicon Industry New Materials Co., Ltd. with an annual output of 200,000 tons of silicon-based new materials comprehensive utilization project is a key new energy project in our city, and it is also a key support project for the construction of the silicon-based new material industry, and has been included in the "14th Five-Year Plan" raw material industry development plan of Gansu Province by the Provincial Department of Industry and Information Technology.

Walking into the company's production workshop, the fire was soaring, the workers performed their duties, and the scene was in full swing. From January to April, a total of 25,900 tons of industrial silicon were produced, 270 million kWh of electricity was consumed, sales revenue of 320 million yuan was realized, and more than 320 people were employed. The second phase of the project will start construction in the second half of this year and be put into production by the end of 2025. After the completion of

employment of more than 800 people. Wang Zhiqiang, the person in charge of the company, said.

On the product production line of Zhangye Lanbiao Biotechnology Co., Ltd., workers are busy assembling the bio-engine smart ecological toilet ordered by the customer. As a specialized and new "little giant" enterprise integrating R&D, production, sales and installation of waterless and flush-free smart ecological toilets, the company aims at the frontier of science and technology, advances to the key places, and makes efforts where it is needed, and develops ecological toilets using microbial degradation technology to realize the degradation and recycling of manure, and solves the problems faced by traditional toilets such as difficult sewage discharge, difficult fecal treatment and high cost, and the products are widely praised.

"With the wide application of waterless flush-free smart ecological toilets in life, the products have been exported to Mongolia, Canada and other foreign markets." Tian Lan, chairman of Zhangye Lanbiao Biotechnology Co., Ltd., said. It is reported that the company has completed a total investment of 189 million yuan in fixed assets, and has built scientific research buildings, workshops and various production lines, and is expected to double its output value this year.

This year, the city thoroughly implemented the requirements of the provincial party committee and the provincial government on the work deployment of project construction, adhered to the target management task, comprehensive scheduling and stable operation, strong reserves in the early stage, fund guarantee to expand channels, mechanism innovation and vitality, and realized the effective improvement of the quality of the city's fixed asset investment and the reasonable growth of the quantity. In the first quarter, the city's fixed asset investment is expected to increase by 25.3% year-on-year, 11.6 percentage points higher than the same period last year.
